C:\Users\andrey.trunin\Downloads\scpi_acm_check>pip

Usage:
  pip <command> [options]

Commands:
  install          Install packages.
  download         Download packages.
  uninstall        Uninstall packages.
  freeze           Output installed packages in requirements format.
  inspect          Inspect the python environment.
  list             List installed packages.
  show             Show information about installed packages.
  check            Verify installed packages have compatible dependencies.
  config           Manage local and global configuration.
  search           Search PyPI for packages.
  cache            Inspect and manage pip's wheel cache.
  index            Inspect information available from package indexes.
  wheel            Build wheels from your requirements.
  hash             Compute hashes of package archives.
  completion       A helper command used for command completion.
  debug            Show information useful for debugging.
  help             Show help for commands.

General Options:
  -h, --help            Show help.
  --debug               Let unhandled exceptions propagate outside the main subroutine, instead of logging them to stderr.
  --isolated            Run pip in an isolated mode, ignoring environment variables and user configuration.
  --require-virtualenv  Allow pip to only run in a virtual environment; exit with an error otherwise.
  --python <python>     Run pip with the specified Python interpreter.
  -v, --verbose         Give more output. Option is additive, and can be used up to 3 times.
  -V, --version         Show version and exit.
  -q, --quiet           Give less output. Option is additive, and can be used up to 3 times (corresponding to WARNING, ERROR, and CRITICAL logging levels).
  --log <path>         Path to a verbose appending log.
  --no-input            Disable prompting for input.
  --proxy <proxy>       Specify a proxy in the form scheme://[user:passwd@]proxy.server:port.
  --retries <retries>  Maximum number of retries each connection should attempt (default 5 times).
```

```
C:\Windows\System32\cmd.exe
--use-deprecated <feature> Enable deprecated functionality, that will be removed in the future.
